

/ Cellular connectivity

A simpler path to bringing your products to market

AVNET[®] SILICA

/ Managing connectivity throughout the device lifecycle

When looking for a connectivity solution for connected devices, Original Equipment Manufacturers (OEMs) must consider the challenges in each part of the device lifecycle

1

Assembly and test in a factory, potentially offshore: Cost-optimized data plan for the assembly line test scenario

2

Change of ownership: Once assembled, appliances sold to several companies each packaging their own services with custom configuration

3

Field deployment in many regions via distributors, installers, retail: Different MNOs

4

Operational life where a service is offered to end-customers: Different data plans depending on end-customer level of service

/ Simplifying secure device connectivity

Avnet Silica's eUICC (Embedded Universal Integrated Circuit Card) provides the most flexible, secure, and open cellular connectivity option in the market

Flexible service

A GSMA 3.2 eUICC (Embedded Universal Integrated Circuit Card) manufactured by IDEMIA able to host several MNO profiles concurrently

Out of the box ready

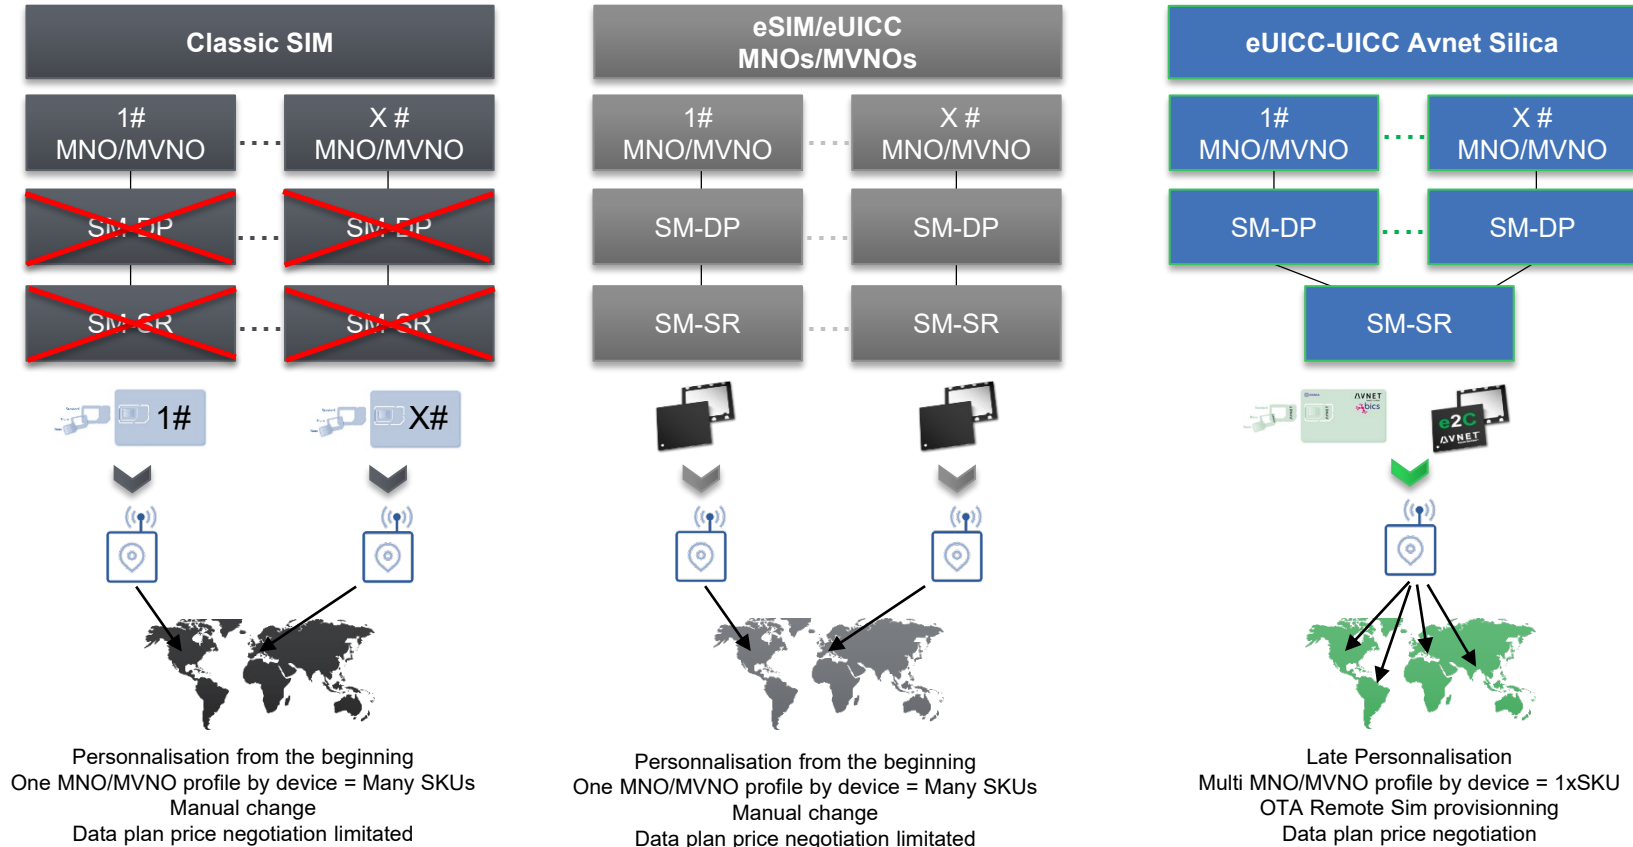

Pre-installed with a multi-IMSI profile and initial pre-paid global cellular network (2G/3G/4G/Cat-M/Cat-NB) data allowance

Remote management

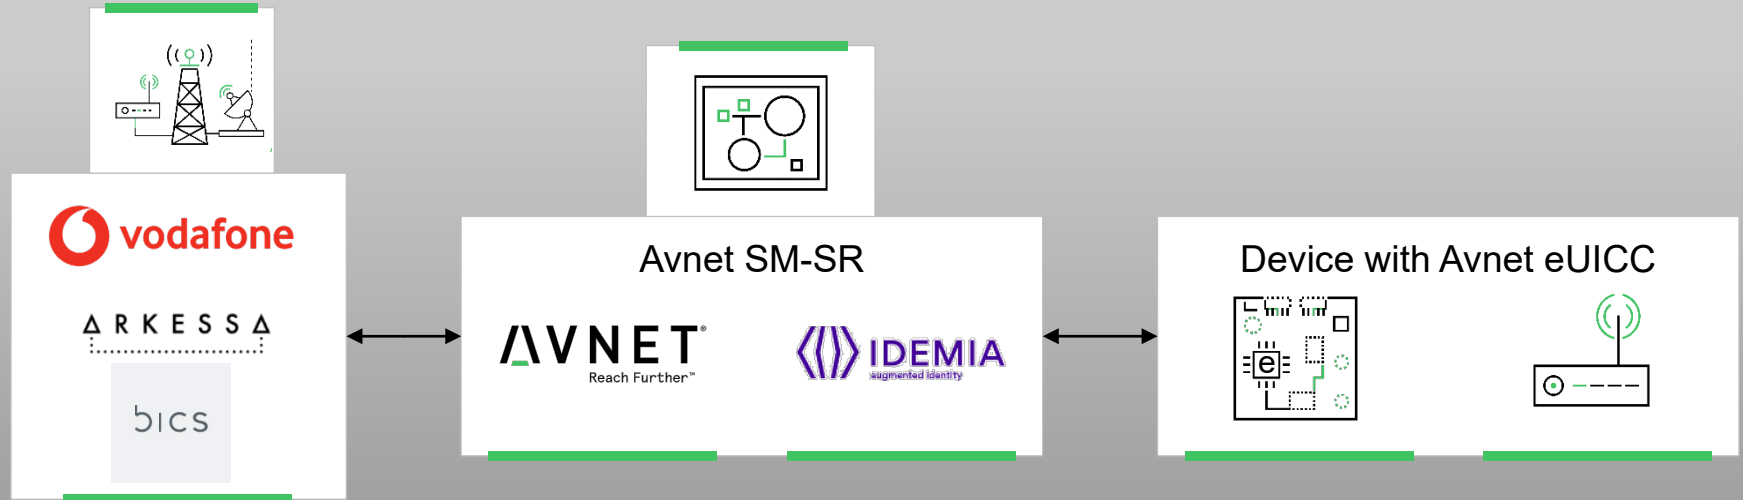

Provision and reprogram devices from Avnet's Subscription Management Platform (SMP), enabling secure management of MNO profiles

/ What's currently available on the market?

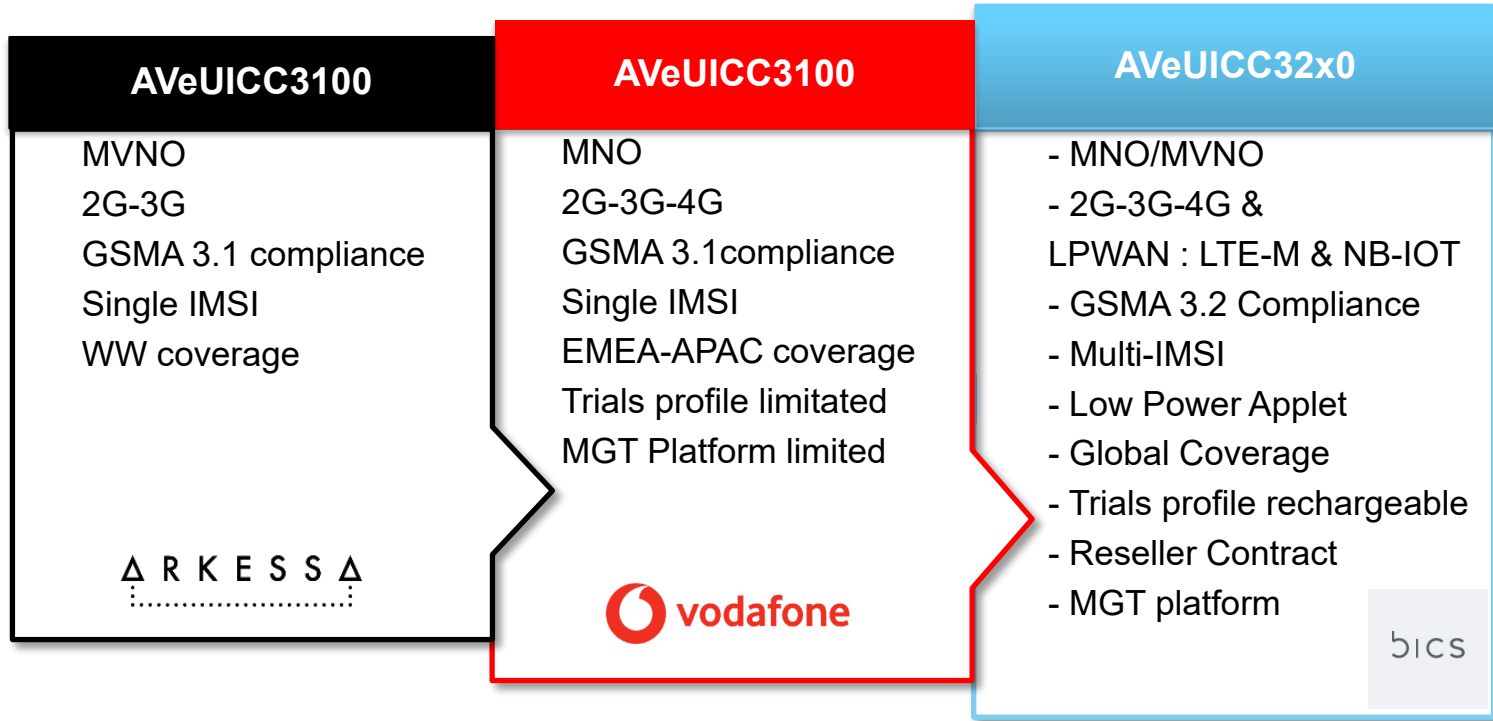

/ Architecture

Avnet Silica's eUICC is managed through our SM-SR (Subscription Manager – Secure Routing) platform allowing management of connectivity to multiple global network providers (MNO/MVNO) with more being added soon

/ eUICC family range

/ AVeUICC32x0

eUICC/UICC for cellular IoT connectivity

An Avnet Silica eUICC/UICC manufactured by IDEMIA

- **2FF/3FF/4FF**: Plastic format, **MFF2** : Chip format (VQFN8)
 - T° grade : Consumer, Industrial and Automotive (on request)
 - Pre-installed BICS **Multi-IMSI** (International **M**obile **S**ubscriber **I**dentify) profile
 - **GSMA** 3.2-compliant
 - Low Power Applet
- **Connectivity**
 - Pre-installed Global Bootstrap of partner carrier
 - 100KB of pre-paid Global communication for factory testing
 - **Service**
 - Provisioned for life on Avnet's **S**ubscription **M**anagement **P**latform (SMP)
 - On-demand : Carrier change campaigns (Swap Service)

/ eUICC + connectivity: a complete solution

Easy to start

- All in one package : HW + Connectivity & management platform
- Documentation: Quick start guide, trial kit

Quality of Service

- Get access to the BICS support
- A several level of support within AvS

Collaterals

- GW manufacturers: Teltonika, Miromico...
- Suppliers Dev kit: Renesas

An industrial view of Connectivity

- Automatic flow for profile activation
- Customers = resellers
- 5G enabled

Global coverage, 5G & LPWAN access

/ An easy flow: manufacture, test, store & deploy

Available documentation:

- Datasheet
- Application Note

Delivering anywhere in the world

eUICC status: Ready to activate

Get a preloaded bootstrap profile

100KB of prepaid connectivity

eUICC status: Active
Test

No charge during that period

Max duration is 6 months

eUICC status: Active
Inventory

Billing starts after having consumed 1KB

Activate/Suspend eUICC

Deactivate

eUICC status: Active

The background is a solid green color. There are two white diagonal lines: one in the top-left corner and one in the bottom-right corner, both extending from the edge towards the center.

How to use Cellular Connectivity to accelerate your IOT project

/ e2C – Trials eUICC

Turnkey solution to start your cellular IoT design

1

Packaging

or

Standardized form factors

SIMfit - **2FF/3FF/4FF**
or
MFF2 (chip)

2

Connectivity

An initial cellular Connectivity allowance of **50MB** rechargeable on request

Valid for **3** months after activation

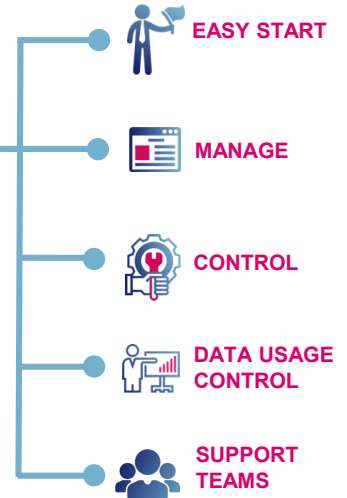

Global Coverage

3

Management

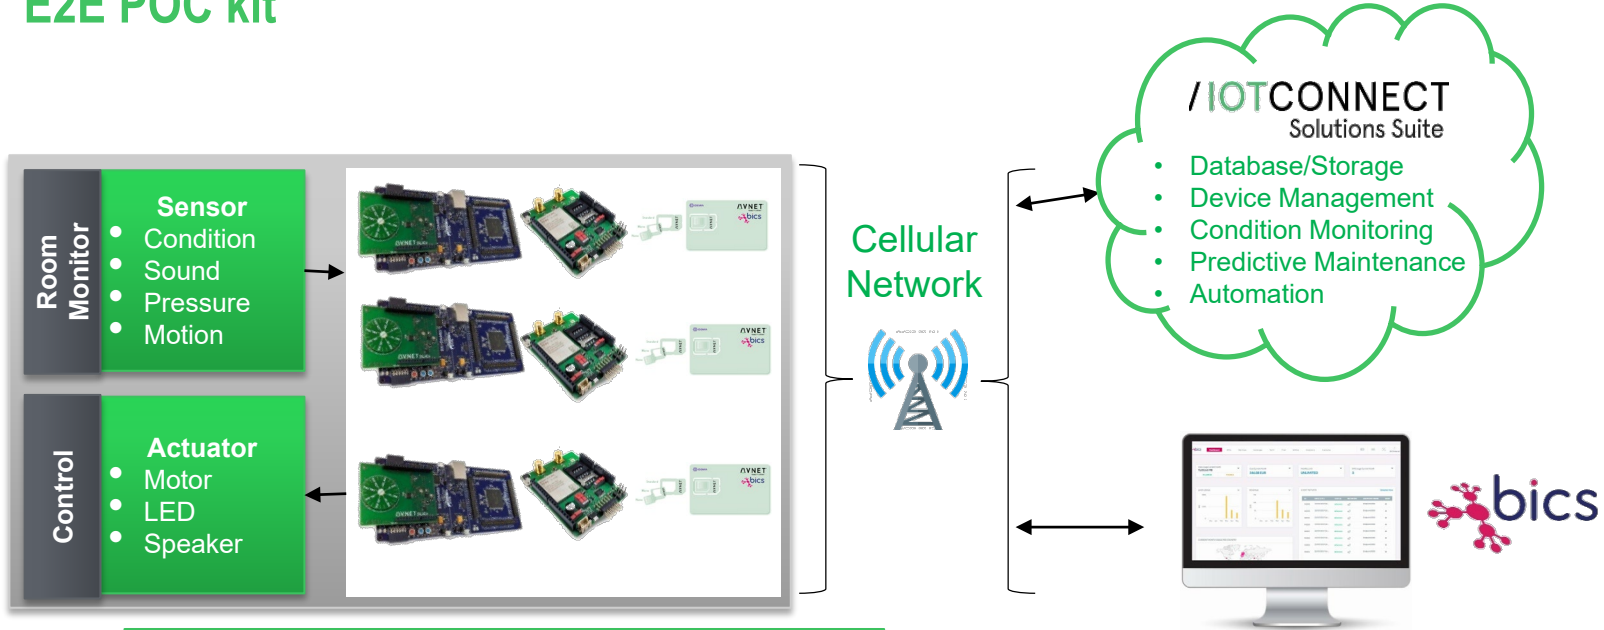

Free access to BICS Connectivity Management Platform (CMP)

/ HoriZone RA Kit – Cat M1/NB1/2G

E2E POC kit

AVSHORIZONE-RENRA-BICS

- Cloud-ready Renesas RA EK-RA6M3 Board
- IoTConnect SDK
- Multisensor Arduino Shield : AVSENSOR-REN-SHIELD-A
- CAT M1/NB1 Shield : AVSNBIOT-BG96-SHIELD-B
- BiCS eUICC : AVE2C-BICS-50M-WT-03-F234-E-TRIALS

Available – 279€

/ LoRaWAN Gateway

bics

Basic version: supports Ethernet and Wifi connectivity

LTE version: supports Ethernet, Wifi, LTE & Connectivity
