# EBV & Avnet Embedded

**Are you looking to fast-track an embedded development?  
Need help building a user interface solution?**

EBV has joined forces with Avnet Embedded to extend the range of services EBV delivers. The experienced embedded compute, display, software, and manufacturing capabilities of Avnet Embedded are now available through your EBV account manager. Design, manufacturing, and assembly services to speed your embedded solution are just a phone call away.

One of the many challenges today's product development teams is time to market. Achieving a 'first mover' advantage significantly contributes to the product's future commercial success, so engineering teams often find themselves needing help with an aspect or function of a new design. Implementing

new features in a product needs considerable research and prototyping time, occupying precious days in the development schedule.

### **Maybe it's time to call in some additional expertise?**

EBV & Avnet Embedded expertise includes core design competencies of embedded compute, user interfaces and displays, and software solutions. In addition to

product and solution design, Avnet Embedded has in-house manufacturing and assembly capabilities, further easing your time-to-market pressures.

### **Compute**

With decades of industrial computing systems development experience, EBV & Avnet Embedded can offer a complete in-house computer-on-module (COM) embedded design capability. Custom designs can accommodate specific design requirements for connectivity, size, profile, and power consumption.

Design and manufacturing activities are in-house at our European production facilities. Production lines are advanced and highly automated, and strict control of manufacturing maintains security and quality.

Alternatively, customers can select a suitable COM from the 400+ MSC range of award-winning embedded modules to accelerate development schedules and reduce costs. The industrial-grade MSC solutions set the benchmark for longevity and reliability for critical applications.

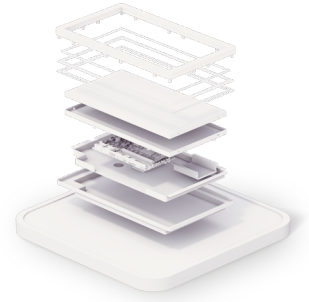

Close working relationships with leading IC manufacturers maintain EBV & Avnet Embedded at the forefront of the latest design methods and silicon technologies.

## Displays

As a world-leading supplier of embedded display solutions, EBV & Avnet Embedded can assist in architecting, designing, and integrating a display solution that meets the needs of your application. Whatever display type your project demands, flexible, rugged, curved, passive, capacitive, EBV & Avnet Embedded work with the world's leading display component manufacturers and innovators to deliver the optimal solution. Design experts work with customers to

accommodate the rigours of environmental conditions their application may encounter. EBV & Avnet Embedded provide complete HMI solutions with embedded compute platforms and software.

## Software

A comprehensive range of embedded software system development services is available from Avnet Embedded.

- Application development
- GUI design
- IoT infrastructure
- Firmware design
- Operating system customisation
- BIOS design
- Board support package (BSP) development

Connectivity and platform technology partners include Amazon Web Services, Microsoft and VMware.

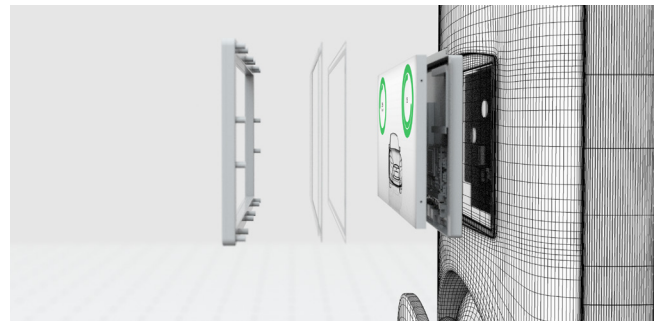

## Quality management credentials

Avnet Embedded quality management standards compliance includes:

- ISO 9001:2015
- ISO 14001:2015
- ISO 45001:2018
- ISO 13485:2016

## Manufacturing and assembly

Avnet Embedded has two engineering, manufacturing, and assembly sites in Germany. The Stutensee headquarters campus, located in central Germany, offers high quality compute design and manufacturing services. Based in southern Germany, the Freiburg campus focuses on system assembly and integration. The facility uses cell-based assembly and robotics for high precision and industry-leading quality.

## EBV & Avnet Embedded - Your Product Lifecycle and Technology Partner

Think of EBV & Avnet Embedded as your partner across the whole product development lifecycle, from idea to production.

An engagement starts with speaking to your EBV account manager. After understanding your business goals and

technology challenges, product innovation and solution design teams set to work architecting the optimal solution. Once validated, production can commence, and Avnet's logistics infrastructure can take care of the shipping to your factories or direct to customers.

Using EBV & Avnet Embedded has many benefits. Speeding time to market gets your product in customers' hands faster than competitors. You can rest assured that the design incorporates all the latest technologies, and EBV's expertise and supply chain efficiency are working for you.
